Energy Technology Options

for the Twenty-First Century

Environment, Economy and Society

Four full-day workshops and a concluding conference at McMaster University — a series of dialogues among decision makers, energy analysts, engineers, and scientists in pursuit of a realistic vision of the energy system that will evolve in the early decades of the 21st century.

Workshop I — Thursday, January 23, 1992

Centralized Energy Supply Alternatives

Advanced large-scale electricity generation technologies, including fossil fuel-fired plants; fission and fusion energy; and centralized hydro, solar, wind, geothermal, and other advanced facilities.

Workshop II — Thursday, March 5, 1992

Decentralized Energy Supply Alternatives

Advanced small-scale technologies, including solar, wind, biomass, and hydro; energy from waste; cogeneration; fuel cells and batteries; clean fuels.

Workshop III — Thursday, May 7, 1992

End Use Options — Buildings and Equipment / Appliances

Space conditioning of industrial, commercial, and residential buildings; efficient appliance and lighting technologies; efficient motors; and process energy technologies.

Workshop IV — Thursday, June 18, 1992

End Use Options — Transportation

Vehicles fuelled by natural gas, propane, methanol, and electricity; efficient engine technologies; mass transportation options; efficient planning and management options.

Conference — October 1-2, 1992

Energy Technology Options for the Twenty-First Century

A synthesis of the workshop issues and conclusions, including management of energy demand and efficiency; options for centralized and decentralized energy systems; global warming and other environmental issues; nuclear safety; energy policy.
